

Cashtronic[®] MVX

Pneumatic Tube Systems for retail

Cashtronic®MVX Two-Way

The most versatile on the market

90MM, 110MM, 160MM

Cashtronic®MVX Two-way is the system that can take care of the total cash and valuables flow in any store, such as:

- deposit of cash into safe or to the back-office
- distribution of change from the back-office to the check-out line
- transport of valuables such as lottery tickets, receipts, etc.

To provide the best possible transport abilities, Cashtronic®MVX Two-way can be configured according to “from all – to all” principle, or as ascribed by customer’s security and administration requirements.

The Main Control Unit of Cashtronic®MVX Two-way differs from other systems on several distinct points:

- easy programming
- user-friendly interface
- all system messages are presented in clear text

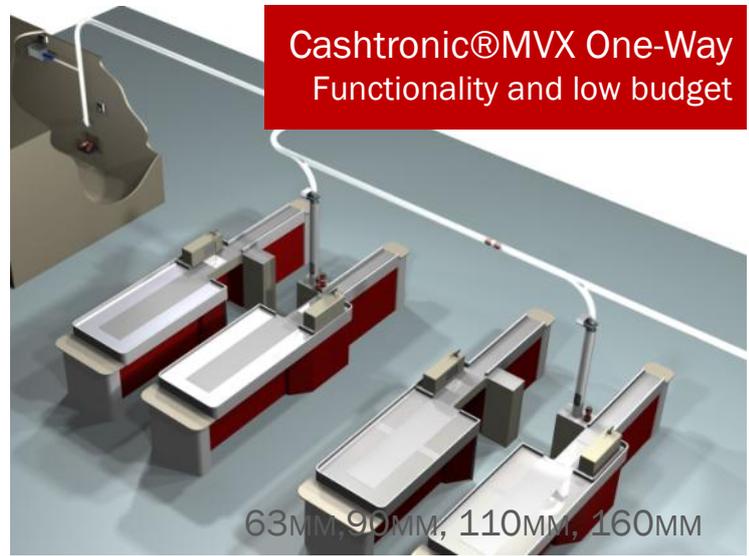

Also, the security functions of the system are the best on the market:

- tracking carriers during transport
- system has control of carrier during send and receive with alarm function
- optional connection to a PC for using Hanter software for extended system statistics

Using Hanter Heavy Duty carriers, Cashtronic®MVX Two-way can lift up under the most conditions 2-2,5kg heavy loads, which is the market leading figure.

Cashtronic®MVX One-Way

Functionality and low budget

63MM, 90MM, 110MM, 160MM

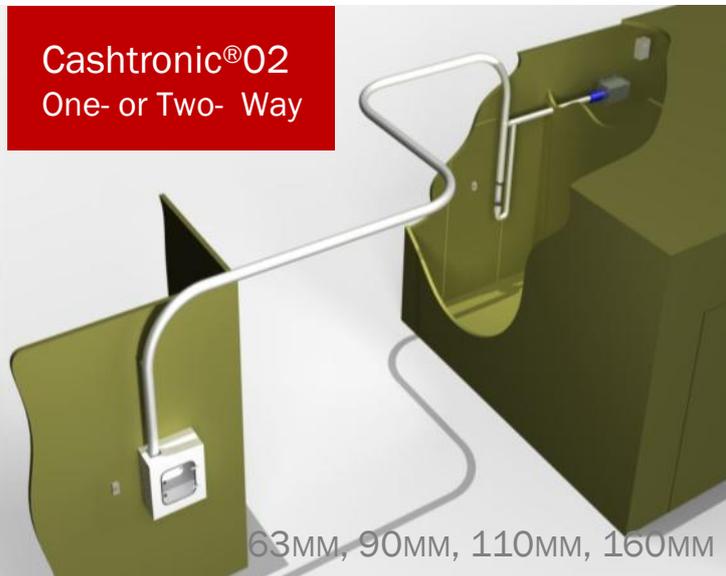

As the name states, Cashtronic®MVX One-way differs from Cashtronic®MVX Two-way by the cash and valuables are transported in one direction. Generally, as in other Oneway systems, all transports go to one address – to a safe or to a back-office. But, here the similarity of the Cashtronic®MVX One-way with the other one-way systems on the market ends.

Cashtronic®MVX Main Control Unit offers complete flexibility between both Two-way units and One-way units. It gives a unique possibility to equip the check-out line with inexpensive One-way units and combine the system with Two-way units to selected locations in the store.

The system programming and security advantages of Cashtronic®MVX One-way are as good as in the Cashtronic®MVX Two-way:

- user-friendly Main Control Unit with system status messages presented in clear text
- possibility of tracking carriers during transport
- possibility to check carriers' send and arrival status
- heavy duty carriers that can be used for heavy loads
- optional connection to a PC for using Hanter software for extended system statistics

Cashtronic®02 One- or Two- Way

When transportation is needed just between two points, Cashtronic®02 is a very popular system. The main arguments for Cashtronic®02 are low cost, big variety of stations (slide stations, cabinets, safes and other) and extraordinary reliability.

Hanter IT has developed solutions that can be adjusted for transport of goods, samples, documents, cash and valuables.

Some variants of Cashtronic®02 are made to require as little installation as possible: connect the tubes and plug in the system. Done!

Hanter IT has chosen to develop one flexible system platform that can be used in different ways to solve each individual task.

Such decision has several important advantages:

- our customers don't have to be familiar with several systems, just one. This is why Cashtronic®MVX is perfect for chain clients, since the Hanter solution can be standardized for all store formats.
- all Cashtronic®MVX variants can be equipped with carrier send/arrival control and can track carriers through the system to eliminate possibility of theft
- Cashtronic®MVX systems have user-friendly control unit with all system messages presented in clear text
- using Cashtronic®MVX simplifies service and maintenance tasks, because the systems have the same programming platform and electronics

Some tasks require ergonomic solutions, while other – rigid. Therefore Hanter IT has developed carriers with Swivel Cap and Screw Cap in different dimensions.

Swivel Cap carriers are ideal for transport of bank-notes, documents, samples and to some extend coins.

All Hanter Screw Cap carriers are heavy duty and are perfect for heavy weights handling (for example coins).

110mm Screw Cap Hanter carriers can also be secured by security seals with serial number on. The carriers can on request be produced in the several colors and with the customer's logotype on.

Cashtronic®MVX Cash Handling Systems

About Hanter IT

HANTER INGENJÖRSTENIK AB is one of Europe's leading suppliers of material handling and pneumatic tube systems to industry, trade and hospitals. Since the 1960's, experience combined with advanced new thinking has made Hanter Ingenjörsteknik specialists in modern and efficient conveyor systems.

Our products are designed and manufactured in order to provide the best quality to ensure reliability and a long product life.

In close co-operation with our customers current transport requirements are identified. With an overall view and great experience we can offer reliable and cost-effective solutions.

With our own design department and manufacturing we achieve short lead times and great flexibility. Prior to delivery we make the necessary checks and tests in our workshop. Our experienced fitters carry out mechanical and electrical installation work. Our commitment also includes the training of operators and maintenance staff.
